

To solve this challenge we can use **CyberChef**, an online decryption tool.

Input

BQS?8F#ks-B5_]@B5B5<@;p9@@<tUBF])[hA8OkHA4Am[2u|

abc 47 1

Output 

|BQS?8F#ks-B5_]@B5B5<@;p9@@<tUBF])[hA8OkHA4Am[2u|

By clicking the little **wand** near Output we get the flag. Alternatively, we could use the **Magic** recipe for more complex encodings.
