

We upload the file to <https://www.aperisolve.com/> and we find... nothing? Well, if we look at the Informations area, we see that the file was already uploaded to this website before and that a common password that was uploaded with it was "stug". Looking back the challenge description, it might work so we give it a shot.

After reuploading and giving aperisolve the password stug, StegHide is able to retrieve the flag.
