

To find the flag we first need to open the elf file in IDA, locate **main.main** and scroll down a bit through **Ida-View**:

```
loc_48D5CB:
mov     [rsp+80h+var_70], rax
mov     [rsp+80h+typ], rcx
lea     rax, aCtf0962393ce38 ; "ctf{0962393ce380c3cf696c6c59a085cde0f7e"...
mov     [rsp+80h+var_78], rax
call    runtime_memequal
movzx   eax, [rsp+80h+var_68]
test    al, al
jz      short loc_48D57E
```

After double-clicking the variable name, we get to see most of the flag, as we are missing the last part of it. However, if we look a couple lines below we notice the last 4 characters of the flag.
