

We get 2 pem certificates and 2 ciphertexts.

We can use https://report-uri.com/home/pem_decoder to decode the pem certificates (open each with notepad and copy paste the text there)

Next, we get the value of n and e, in hex. Use <https://www.rapidtables.com/convert/number/hex-to-decimal.html> to convert the values to decimal and then <https://www.dcode.fr/rsa-cipher> to decode the ciphertexts.
