

Similar to RSA-Pop-Quiz, but this time we need to automate our answers. To do this, while answering, we can use `print(r.recvuntil("?"))` or `print(r.recvuntil(":"))` to see the next questions.

Q1. Simple googling, make sure to type in lowercase

Q2. Multiplication

Q3. Division

Q4 to Q9: use <https://www.dcode.fr/rsa-cipher>

Q10. yes (we do not wish to upset our AI overlords now do we?)
