After looking through the capture, I kept finding cell phone tower related stuff. For example, in http stream 77 I found:

Mobile Country Code (MCC): 208 (France)

Mobile Network Code (MNC): 20 (Bouygues Telecom, a French mobile network)

Location Area Code (LAC): 22510

Cell ID: 1106

Entering this data in https://www.opencellid.org/ revealed some coordinates:

 Latitude: 44.703316
Longitude: -1.03705

Looking up those coordinates on google revealed the name of the town: **Lanton**

A quick Wikipedia search of the town: https://en.wikipedia.org/wiki/Lanton,_Gironde

From what I understand we either need to use the Postal code or the INSEE code.

After a quick test, what we needed was the INSEE code.
