After opening the pcap file with wireshark, we try different things and end up trying to export http objects. There, we see there is a file with a weird name.

`%3fimportant=The%20content%20of%20the%20f%20l%20a%20g%20is%20ca314be22457497e81a08fc3bfdbdcd3e0e44`

We copy the whole thing and url decode it. After doing so, we get the flag. Make sure to wrap in CTF{}
